BIBLIOGRAPHY ON COLD REGIONS SCIENCE AND TECHNOLOGY
Cumulative Subject Index to Volumes 28-32

INTRODUCTION

This index is a cumulation of the annual subject indexes to five volumes of the *Bibliography on Cold Regions Science and Technology* (28-32). Because of its size, it has been printed in two parts Part 1 contains pages 1-718, *Ablation* through *Marine transportation*; Part 2 contains pages 719-1427, *Marion Island* through *Zinc alloys*.

In anticipation of this cumulation (and the companion Author Index) the annual indexes have been bound separately rather than with the bibliography volumes, so they now may be discarded.

The index is arranged alphabetically by subject. Two kinds of subject terms are included: those contained in an authority list, and free terms used as needed, without vocabulary control. This duality of indexing principle results in a somewhat uneven frequency distribution of terms Geographic terms are also included, generally by country.

There have been certain changes in terms used in the course of the five years covered in this cumulation. Hence some concepts may be indexed under two synonymous terms. Some of these inconsistencies were eliminated by making appropriate corrections in the original computer records. Others were handled by cross referencing to avoid an inordinate editing load.

The subject (or geographic) terms are followed by the title of each pertinent article (original, translated, or modified for conciseness or detail), listed in order by accession number. The title is followed by the principal author's name, the date of publication, the pagination (found useful by some users for value judgments), and the language in which the paper is written (in the case of translations, English is given as the language).

The accession numbers listed after each index entry refer to the *Bibliography* section of the *Bibliography on Cold Regions Science and Technology*. The first two digits represent the volume number; these are followed by a hyphen and the sequence number within the volume.
